Chemical resistance of Socorex® dispensers

Bottle-top dispensers are used daily for dispensing a wide range of chemicals. Therefore, instruments have to meet various requirements assuring safety of the laboratory staff and their work. Dispensers must not give off any substances which may interfere with trace analysis, have cytotoxic properties, distort optical tests or influence chromatographic methods and residue analysis.

Materials

Special attention was paid to component materials (see charts below). All parts of the Acurex™ and Calibrex™ dispensers in contact with the liquid are made of robust and chemically inert materials providing for long instrument life.

Parts	Acurex™ 501
Valve	Pyrex glass and synthetic ruby
Barrel	Neutral glass
Plunger	PTFE coated glass
Reservoir	Amber glass or borosilicate glass
Delivery jet and union	PVDF / FEP / PFA

Parts	Calibrex™ 520	Calibrex™ 521	
Feed tube	PTFE		
Intake valve	Ceramic	Borosilicate glass	
Valve balls	Pyrex glass	Ceramic, ruby	
Valve springs	Platinum-Iridium		
Barrel	Borosilicate glass		
Barrel plate	PTFE		
Plunger	PFA coated glass		
Outlet valve	Ceramic		
Body	ETFE		
Delivery jet assembly	PTFE/ETFE		

Chemicals from A to Z

The following list includes most currently used chemicals. It provides useful information for the safe and adequate use of Acurex™ 501 and Calibrex™ 520/521 dispensers. However, safety precautions and recommendations in operating instructions must be followed carefully.

Code explanations

- A = Good resistance
- **B** = Acceptable with limitations
- C = Not recommended
- 1 = Possible crystallisation blockage (do not let dry plunger/barrel together).
- 2 = Swell of plunger protection layer, possible peeling.
- 3 = Acid vapours (better resistance with lower concentration). Do not leave instrument on bottle.
- 4 = Risk of softening or discoloration of external parts through vapours. Do not leave instrument on bottle.
- 5 = Chemical degradation of glass parts (plunger/barrel).
